DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17 and 26-31, drawn to a laser device, classified in class 372, subclass 39.
- II. Claims 18-25, drawn to a method of manufacturing a laser device, classified in class 372, subclass 66.

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the semiconductor laser device as claimed can be made by another, materially different process. Specifically, the side surfaces can be formed by cutting the nonionic and ionic layers at a specified angle.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the search required for Group II is not required for Group I, and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 2815

If Applicant elects Invention I, further restriction to one of the following inventions is required under 35 U.S.C. 121:

- III. Claims 1-8, 17, and 26-31, drawn to a laser device, classified in class 372, subclass 39.
- IV. Claims 9-16, drawn to a method of producing laser light, classified in class 372, subclass 70.

Inventions IV and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process. Specifically, the laser device can be used in a process wherein the top surface of the laser slab is pumped with input light.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the search required for Group II is not required for Group I, and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
